Contents Page:

Introduction:
Blue Chip Group Pty Ltd has had these tables prepared by a third-party structural engineer for use by people skilled in the design and specification of the type of structures covered. Accordingly, it accepts no responsibility for misinterpretation of the information provided or any errors or omissions. Users should satisfy themselves as to the suitability of the span tables for any given application or project.

Australian Standards and Compliance:
It is assumed that the proposed structural sections and aluminium extrusions comply with the following Australian standards.

- AS 1170.0:2002, Structural Design Actions – General Principles
- AS 1170.1:2002, Structural Design Actions – Permanent Imposed and Other Actions
- AS 1170.2:2002, Structural Design Actions – Wind Actions
- AS 4055:2006, Wind Loads for Housing
- AS 1664:1997, Aluminium Structures
- AS 1866:1997, Aluminium Extrusion & 6063-T6 Alloy Composition

Australian Standards and Compliance (continued):
All other products such as fixings are to be used in accordance with the relevant manufacturer's specifications along with appropriate advice from a qualified professional as required to ensure NCC compliance and suitability for any given project or application.

Design Loadings:

Base Loads:
- Dead Load (DL) – Only self-weight is allowed for
- Wind Load (WL) – 0.25 ≤ KPa ≤ 3.5, where KPa = Wind Pressure
- Span tables are designed for non-trafficable strip ceiling when used in horizontal plane

Wind Loads:
- Span tables are designed for wind pressure between 0.25 ≤ KPa ≤ 3.5
- Wu = Ultimate wind load (Upwards or downwards)
- Ws = Serviceability wind load (Upwards or downwards)

Ultimate Limit State:
- 0.9DL + Wu = (Upwards)
- 1.2DL + Wu = (Downwards)

Serviceability Limit State:
- DL + Ws = (Upwards)
- DL + Ws = (Downwards)

Serviceability Deflection Limits – 2 Scenarios:
- Dead Load: Span/150 & Span/300
- Wind Load: Span/150 & Span/300

Structural Aluminium:
All workmanship and materials to be in accordance with AS 1664 except if varied by contract documents. Structural aluminium shall be erected plumb and true to line. Temporary bracing shall be installed and shall be left in place until other means are provided to adequately brace the structure.

Wind Class:
Wind classification has been chosen as per AS 4055. The table below shows the design wind speeds for classes N1 through to N6.

Regional Wind Speed:
Design wind speeds were adopted from AS 4055.
